

EARTH DAY

On April 22, 2025, Carmel proudly celebrated Earth Day with great enthusiasm and commitment towards environmental conservation. The event was thoughtfully organized by the Eco Club, whose dedicated members worked together to spread awareness about sustainable living and the importance of protecting our planet.

The morning assembly began with a special presentation highlighting the history and significance of Earth Day. Students shared insightful facts, poems, and a short skit emphasizing the urgent need to reduce pollution, plant more trees, and adopt eco-friendly practices in daily life. One of the highlights of the celebration was an inspiring Talk Show by Mrs. Honey Dhawan, an esteemed environmentalist and educator, who addressed the students on the theme "Our Earth, Our Responsibility." Mrs. Dhawan encouraged the young audience to make conscious choices that benefit the environment, such as minimizing plastic usage, conserving water, and promoting biodiversity. She emphasized that small, everyday actions can lead to a significant positive impact on the planet.

The Eco Club also organized a pledge ceremony where students and teachers promised to take at least one green step forward, whether by reducing waste, planting a sapling, or spreading awareness within their community. The Earth Day celebration at school not only strengthened the students' understanding of environmental issues but also inspired them to be responsible global citizens. The event concluded with the hope that these young minds will carry forward the message of Earth Day throughout the year.
